

Show me/Tell me Questions

In your driving test you will be asked 2 vehicle safety questions by the examiner.

One question will be a 'tell me' question where you need to explain how you would carry out a safety task. This will be at the beginning of the test before you start driving.

The second question will be a 'show' me question where you show how you would carry out a safety task while your driving.

You will get one driving fault (sometimes called a 'minor') if you get one or both questions wrong.

If your driving is dangerous or potentially dangerous while you answer the 'show me' question then this would fail your driving test.

'Tell Me' questions

1. Tell me how you would check that the brakes are working before starting a journey.

Brakes should not feel spongy or slack. Brakes should be tested as you set off. Vehicle should not pull to one side.

2. Tell me where you would find the information for the recommended tyre pressures for this car and how tyre pressures should be checked.

Manufacturer's guide. I would use a reliable pressure gauge, check and adjust pressures when tyres are cold, don't forget spare tyre, remember to refit valve caps.

3. Tell me how you make sure your head restraint is correctly adjusted so it provides the best protection in the event of a crash.

The head restraint should be adjusted so the rigid part of the head restraint is at least as high as the eye or top of the ears, and as close to the back of the head as is comfortable.

4. Tell me how you would check the tyres to ensure that they have sufficient tread depth and that their general condition is safe to use on the road.

There should be a minimum of 1.6mm of tread depth across the central three-quarters of the width of the tyre, and around the entire outer circumference of the tyre. There should be no cuts and bulges.

5. Tell me how you would check that the headlights and tail lights are working. You don't need to exit the vehicle.

Explain you would operate the switch (turn on ignition if necessary), then walk round vehicle (you don't need to physically check the lights).

6. Tell me how you would know if there was a problem with your anti-lock braking system.

The warning light should illuminate if there is a fault with the anti-lock braking system.

7. Tell me how you would check the direction indicators are working. You don't need to exit the vehicle.

Explain you would operate the switch (turn on ignition if necessary), and then walk around vehicle (you don't need to physically check the lights). Alternatively, switch on the hazard lights and walk around the vehicle.

8. Tell me how you would check the brake lights are working on this car.

Explain you'd operate the brake pedal, make use of reflections in windows or doors, or ask someone to help.

9. Tell me how you would check the power-assisted steering is working before starting a journey.

If the steering becomes heavy, the system may not be working properly. Before starting a journey, 2 simple checks can be made.

Gentle pressure on the steering wheel, maintained while the engine is started, should result in a slight but noticeable movement as the system begins to operate. Alternatively turning the steering wheel just after moving off will give an immediate indication that the power assistance is functioning.

10. Tell me how you would switch on the rear fog light(s) and explain when you would use it/them. You don't need to exit the vehicle.

Operate switch (turn on dipped headlights and ignition if necessary). Check warning light is on. Explain fog lights would be used when visibility is less than 100 metres.

11. Tell me how you switch your headlight from dipped to main beam and explain how you'd know the main beam is on.

Operate switch (with ignition or engine on if necessary), check with main beam warning light.

12. Open the bonnet and tell me how you would check that the engine has sufficient oil.

Identify dipstick/oil level indicator, describe take out the dipstick, give it a wipe, place back in, take it out again to check of oil level against the minimum and maximum markers ideally. Ideally, when the engine is cool and on a level ground.

13. Open the bonnet and tell me how you would check that the engine has sufficient engine coolant.

Identify high and low level markings on header tank where fitted or radiator filler cap, and describe how to top up to correct level. When the engine is cool and on level ground.

14. Open the bonnet and tell me how you would check that you have a safe level of hydraulic brake fluid.

Identify reservoir, check level against high and low markings.

You need to open the bonnet and tell the examiner how you would do the check if you're asked question 12, 13 or 14.

'Show me' questions (on the move)

- 1. When it's safe to do so, can you show me how you wash and clean the rear windscreen?**
- 2. When it's safe to do so, can you show me how you wash and clean the front windscreen?**
- 3. When it's safe to do so, can you show me how you'd switch on your dipped headlights?**
- 4. When it's safe to do so, can you show me how you'd set the rear demister?**
- 5. When it's safe to do so, can you show me how you'd operate the horn?**
- 6. When it's safe to do so, can you show me how you'd demist the front windscreen?**
- 7. When it's safe to do so, can you show me how you'd open and close the side window?**
